 INT.CL. : B60T 7/10 G05G 5/18
 TITLE : OPERATION DEVICE OF PARKING BRAKE

ABSTRACT : PURPOSE: To prevent any careless lock-release by making it lock-free by way of providing a latchet claw on a freely swingable lever by means of an end part grip and connecting the end part of a lock-release rod to a slide member operative with a push-button on the grip.

CONSTITUTION: One end of a brake wire 23 is attached to an operation lever 14 with its one end axially supported by a bracket 11 and a grip 15 is provided on the other end of the operation lever 14. A latchet plate 12 forming latchet teeth 12a is set on the bracket 11 and it is made free to lock with the latchet claw 17 of the operation lever 14. One end of a lock-release rod 18 is connected to the latchet claw 17 and the other end is connected to a slide member 19 free to work by the pressing operation of a push-button 16 provided on the grip 15. The lock-release action is practiced by the depressed action of the push-button 16 and the turning motion of the operation lever 14, and consequently, it is possible to prevent any careless lock-release.
